Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 June 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 19-47, drawn to a machine component monitoring system, classified in class 702, subclass 188.
 - II. Claim 17, drawn to a combined sensor and determining unit, classified in class 702, subclass 190.
 - III. Claim 18, drawn to a determining unit, classified in class 702, subclass 189.
2. Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)).

In the instant case, the combination as claimed by Invention I does not require the particulars of the subcombination as claimed by Invention II because the combined sensor and determining unit may be patentable by itself without the details of the machine component monitoring system.

Similarly, the combination as claimed by Invention I does not require the particulars of the subcombination as claimed by Invention III because the determining

Art Unit: 2857

unit may be patentable by itself without the details of the machine component monitoring system.

Further, the combination as claimed in Invention II does not require the particulars of the subcombination as claimed in Invention III because the determining unit may be patentable by itself without the details of combining said determining unit with sensors and a monitoring system.

The subcombinations have separate utility such as for use in any environment where a sensor and determining unit, or a determining unit alone are needed, other than in a machine monitoring system such as the one recited in claims 1-16 and 19-47.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Brian Hannon on September 26, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
